<u>Is the vaccine safe</u> for me and my baby? What has changed over time?

- Early in the pandemic, we didn't know the effects of the vaccine on pregnant women and their babies.
- Now, we have lots of data, and we can confidently say: the COVID-19 vaccines are very safe for you and your baby!
- As of December 2021, more than
 179,000 pregnant women have been vaccinated against COVID-19.
- There have been no reports of any increased risk of pregnancy loss, growth problems, or birth defects.
- COVID-19 vaccines are not live vaccines, and pregnant women and their babies cannot get COVID-19 from the vaccine.

In fact, the real risk is when a pregnant woman chooses NOT to get vaccinated.

Women who become ill with COVID-19 and have symptoms during pregnancy:

- Are 2 times more likely to need ICU care.
- Are 2 to 3 times more likely to need advanced life support and a breathing tube.
- Have a 70 % increased risk of dying.
- Are at an increased risk of having a stillbirth or preterm birth.
- Increased risk of having a baby infected with COVID-19.

HOW DO I GET A COVID-19 VACCINE?

- Contact your local health department to make an appointment or ask them where mobile vaccine clinics are located.
- √ Talk to your OB/GYN.
- Check with your local pharmacy. They will likely offer vaccines.
- ✓ Contact your local community health center to make an appointment.
- ✓ Speak with your employer about getting a COVID-19 vaccine. They may be helpful in making arrangements to get a vaccine.

Pregnancy and the COVID-19 Vaccine

- ✓ GET VACCINATED!
- Wear a mask
- Social distance
- Wash your hands

COVID-19 Vaccine Awareness Campaign

COVID-19 VACCINES ARE SAFE AND EFFECTIVE

Types of vaccines available in the US:

- Pfizer
- Moderna
- Johnson & Johnson (J&J)

Get your initial doses now. Full protection kicks in after about **two weeks**. A booster or an additional dose is needed several months after completing your initial doses.

RECOMMENDATIONS

- + Get vaccinated. Get Boosted.
- + Get your family vaccinated and boosted.
- + Wear a mask when indoors even when you are up to date on your vaccines. Wear a mask in crowded outdoor settings.
- + If you are up to date on your vaccines and are exposed to COVID-19, get tested 5-7 days after exposure, as the CDC recommends.
- For women who are pregnant, breastfeeding, or trying to get pregnant, vaccines are critical for keeping moms and their babies healthy.

+ For women between 18-60 years old, we recommend getting Pfizer or Moderna.

WHAT TO EXPECT AFTER YOU ARE VACCINATED?

It is important to get vaccinated, even if you have had COVID-19.

It is completely FREE and does NOT require any form of identification.

There are various types of vaccines. All vaccines against COVID-19 are safe and effective.

After vaccination you may experience: arm pain, headache, fever, or chills.

You will feel better a few days after your injection.

You are considered fully vaccinated two weeks after your final dose.

Continue to wear a mask, wash your hands, and maintain social distance.

You did your part to protect yourself and others from COVID-19!

BENEFITS OF VACCINATION

- Vaccination protects you, your family, your children, and your co-workers from becoming seriously ill and being hospitalized.
- Vaccination decreases risks for moms and their babies.
- Vaccination decreases the number of new, severe and deadly COVID-19 cases in your community.
- Vaccination protects hospitals and healthcare providers from being overwhelmed with patients severely ill with COVID-19.
- The more people vaccinated in our community, the less we need to worry about new variants.

RISKS FOR UNVACCINATED

- X Higher risk of COVID-19 infection.
- X Higher risk of serious infection, hospitalization, and death.
- X Higher risk of being exposed to new mutations that are more contagious and dangerous.
